

# Paintingwala Website

## 1. Basic Website Functionality

- Open the website and verify it loads without errors.
- Check that all main pages open correctly.
- Test navigation menu links (Home, About, Services, Contact).
- Verify all buttons and clickable elements work.
- Ensure the logo redirects to the home page.

## 2. Form Testing

- Check that all required fields are validated.
- Try submitting the form with empty fields.
- Test invalid email and phone formats.
- Verify the form submits successfully with valid data.
- Ensure success or error messages appear correctly.

## 3. UI / Design Testing

- Check for spelling or grammar mistakes.
- Verify text alignment and spacing.
- Ensure images are not stretched or broken.
- Check consistent fonts, colors, and button styles.
- Look for overlapping elements.

## 4. Responsive Testing

- Test the website on mobile, tablet, and desktop.
- Ensure navigation works on mobile devices.
- Verify images scale properly.
- Check forms and buttons work on small screens.
- Ensure there is no horizontal scrolling.

## 5. Browser Compatibility

- Test the website in Chrome.
- Test the website in Microsoft Edge.
- Test the website in Firefox.
- Verify layout and features work the same across browsers.

## **6. Link Testing**

- Click all internal links.
- Verify no broken links exist.
- Ensure no page shows a 404 error.

## **7. Performance Testing**

- Check page loading speed.
- Ensure images are optimized.
- Verify the website loads properly on slower internet connections.

## **8. Basic Security Checks**

- Ensure admin pages are not accessible without login.
- Check that forms do not accept malicious scripts.
- Verify the website uses HTTPS.

## **9. Bug Reporting Guidelines**

- Record each bug in the bug tracking sheet.
- Provide steps to reproduce the bug.
- Add screenshots or screen recordings.
- Assign severity: High, Medium, or Low.
- Clearly describe expected vs actual behavior.
